

Do Anh Nghia

+84 7988 760 74 | Ho Chi Minh City, Vietnam | anhnghia9a633@gmail.com | do-anh-nghia-uiux-portfolio.vercel.app

Product Designer focused on decision-heavy fintech/B2B products, responsive systems and AI-assisted design-to-code. I use AI for repository grounding, synthesis, alternative exploration, implementation support and browser QA while keeping product judgment, direct user evidence and consequential design decisions human-owned.

EXPERIENCE

- UI/UX Designer

May 2026 — Sep 2026

MangoAds — SEO Optimization & Web Design Agency

Full-time

- Translated client requirements into IA, user flows, and responsive UI systems across 8+ web projects; standardized reusable Figma components and handoff specifications for more consistent implementation.
- UI/UX Designer

Dec 2025 — Apr 2026

Tikera Technology & Brand Development

Full-time

- Designed user journeys, wireframes, and design systems for 15+ product flows; specified empty, error, loading and edge-case states before development to reduce ambiguity during implementation and QA.
- Intern UI/UX Designer

Sep 2025 — Dec 2025

Trésor Solution Company

Remote

- Supported responsive product flows, reusable UI patterns and developer handoff specifications across MVP work; partnered with engineering on design-to-code details and implementation-ready states.

SELECTED PRODUCT & SYSTEMS WORK

- DesignOps · AI Workflow · Governance · Browser QA, UIUX Factory — AI-assisted Product Design Workflow (do-anh-nghia-uiux-portfolio.vercel.app/case-study-uiux-factory.html)

2026

- Problem:** AI can accelerate plausible output while project truth, ownership and quality evidence remain ambiguous. **System:** evidence states, ADOPT/ADAPT/REJECT decisions, phase-aware skill routing, implementation support, Playwright/axe/Lighthouse QA and root-cause repair. **Boundary:** repository and workflow are real; adoption and efficiency impact remain planned validation.
- Product Design · Financial Decision UX · Responsive Prototype, Nova — Consumer Fintech (do-anh-nghia-uiux-portfolio.vercel.app/case-study-nova.html)

2026

- Problem:** account balance alone can hide obligations that make part of the money unsafe to spend. **Decision:** pair present balance with future commitments and a protected buffer. **Evidence:** working prototype; Round 01 recruiting (0 verified sessions); no measured business uplift.
- Product Design · Operational Systems · Investigation UX, Sentry — Fraud Operations (do-anh-nghia-uiux-portfolio.vercel.app/case-study-sentry.html)

2026

- Problem:** investigators can lose decision context when alert priority, evidence and consequences are fragmented. **Decision:** keep evidence-to-action inside one stable investigation model with explicit recovery paths. **Evidence:** implemented operational prototype and decision-focused case study.
- Information Architecture · Decision-support UX · Responsive Prototype, VAS Education — Website Redesign (do-anh-nghia-uiux-portfolio.vercel.app/case-study-vas-education.html)

2026

- Problem:** prospective families had extensive information but no clear decision path across programs, campuses and admissions. **Decision:** structure the journey as trust → fit → daily reality → action. **Evidence:** implemented responsive prototype; production enrollment impact is not claimed.

EDUCATION & SKILLS

- Education:** University of Science — HCMUS, Information Technology (2021–2026) · Claude Bernard University Lyon 1, Information Technology (2021–2025) · Foundations of Google UX Design (2026).
- Product Design:** problem framing, information architecture, user flows, interaction design, responsive systems, prototyping, state design, trade-off articulation, validation planning, metric trees and evidence boundaries. **AI-assisted workflow:** repository grounding, synthesis, alternative exploration, critique, coding-agent collaboration, design contracts, documentation and root-cause repair. **Implementation & QA:** Figma, HTML/CSS/JS, React/Next.js/TypeScript (Resolve AI, CI-verified), Git/GitHub, Playwright, axe-core, Lighthouse. **Business Analysis:** requirement gathering, user stories, acceptance criteria, process modeling and MVP definition.
