PROFILE

UI/UX Designer who turns business and user problems into structured flows, responsive interfaces and working prototypes. I connect design decisions to evidence, implementation constraints and clearly bounded product outcomes rather than treating UI as decoration.

DESIGN PROCESS

Business problem → **User problem** → **Research / evidence** → **UX hypothesis** → **User flow** → **Interaction** → **UI** → **Prototype** → **Validation** → **Iteration** → **Product outcome**

EXPERIENCE

UI/UX Designer Aug 2026 — Present
MangoAds Vietnam

- Translate business goals and content-heavy requirements into information architecture, user flows, responsive UI, visual systems and interaction states for client-facing web work.
- **Outcome:** implementation-ready interface directions that connect structure, hierarchy and developer handoff; client impact is only claimed when verified.

UI/UX Designer Feb 2025 — Jul 2025
Tikera Technology & Brand Development Ho Chi Minh City

- Turned product requirements into user flows, wireframes and high-fidelity screens, clarifying edge cases and interaction behavior before development.
- **Outcome:** more consistent interface patterns and clearer implementation decisions across product work.

Intern UI/UX Designer Jun 2025 — Dec 2025
Trésor Solution Company Remote

- Supported responsive product flows, screen states and reusable interface patterns, with attention to edge cases and iteration feedback.
- **Outcome:** reviewable interaction models and clearer handoff inputs for the product team.

SELECTED UI/UX WORK

Information architecture / responsive education experience, VAS Education (ngh1aa.github.io/RedesignVAS) 2026

- **For / problem / why:** prospective families choosing a school; a broad content ecosystem existed without a clear decision path, so I reorganized the experience around changing family questions: trust → fit → daily reality → action.
- **Outcome:** implemented responsive prototype connecting brand proof, learning pathways, campus context and admissions in one continuous journey; no conversion outcome claimed.

Product design / SaaS workspace, StudioOS (ngh1aa.github.io/StudioOS) 2026

- **For / problem / why:** small creative teams; dashboards can overload attention or remove project context, so I shaped the interaction model around project health → focus → context → quiet feedback.
- **Outcome:** implemented first vertical slice with overview, search, task completion, project creation, reviews and notifications; next validation is real-team information-architecture testing.

Mobile-first fashion commerce, Atelier (ngh1aa.github.io/Atelier) 2025–2026

- **For / problem / why:** fashion shoppers; editorial storytelling can create desire while hiding practical product decisions, so information density increases with intent across discover → evaluate → buy.
- **Outcome:** implemented mobile-first prototype preserving editorial identity across product discovery, product decisions and checkout; no commercial-performance claim.

EDUCATION

University of Science — HCMUS Ho Chi Minh City
Information Technology 2021 — 2026

Claude Bernard University Lyon 1 Lyon, France
Information Technology 2021 — 2025

SKILLS

- **UX / Product:** problem framing, research synthesis, information architecture, UX hypotheses, user flows, interaction design, validation planning, responsive strategy.
- **UI / Prototyping:** Figma, design systems, high-fidelity prototyping, HTML, CSS, JavaScript, GitHub.
