## PROFILE

---

UI/UX Designer turning business and user problems into clear flows, responsive interfaces and working prototypes, with decisions tied to evidence, implementation constraints and bounded outcomes.

## DESIGN PROCESS

---

**Business problem** → **User problem** → **Evidence** → **UX hypothesis** → **User flow** → **Interaction** → **UI** → **Prototype** → **Validation** → **Iteration** → **Product outcome**

## EXPERIENCE

---

- |                                                                                                                                                                                                                                             |                                         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| <b>UI/UX Designer</b><br>MangoAds                                                                                                                                                                                                           | Aug 2026 — Present<br>Vietnam           |
| • Translate business goals into IA, user flows, responsive UI and interaction states for client-facing web work. <b>Outcome:</b> implementation-ready structure, hierarchy and developer handoff without claiming unverified client impact. |                                         |
| <b>UI/UX Designer</b><br>Tikera Technology & Brand Development                                                                                                                                                                              | Feb 2025 — Jul 2025<br>Ho Chi Minh City |
| • Converted product requirements into flows, wireframes and high-fidelity screens, clarifying edge cases before development. <b>Outcome:</b> more consistent interface patterns and implementation decisions.                               |                                         |
| <b>Intern UI/UX Designer</b><br>Trésor Solution Company                                                                                                                                                                                     | Jun 2025 — Dec 2025<br>Remote           |
| • Supported responsive flows, screen states and reusable patterns for product iterations. <b>Outcome:</b> clearer interaction models and handoff inputs for team review.                                                                    |                                         |

## SELECTED UI/UX WORK

---

- |                                                                                                                                                                                                                                                                            |           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>IA / responsive education experience</b> , VAS Education ( <a href="https://ngh1aa.github.io/RedesignVAS">ngh1aa.github.io/RedesignVAS</a> )                                                                                                                            | 2026      |
| • For prospective families choosing a school, solved “information without a path” with a question-led sequence: trust → fit → daily reality → action. <b>Outcome:</b> responsive prototype connecting brand proof, pathways, campuses and admissions; no conversion claim. |           |
| <b>Product design / SaaS workspace</b> , StudioOS ( <a href="https://ngh1aa.github.io/StudioOS">ngh1aa.github.io/StudioOS</a> )                                                                                                                                            | 2026      |
| • For small creative teams, reduced dashboard overload with project health → focus → context → quiet feedback. <b>Outcome:</b> first implemented slice covering overview, search, tasks, creation, reviews and notifications; next step is real-team IA validation.        |           |
| <b>Mobile-first fashion commerce</b> , Atelier ( <a href="https://ngh1aa.github.io/Atelier">ngh1aa.github.io/Atelier</a> )                                                                                                                                                 | 2025–2026 |
| • For fashion shoppers, balanced editorial desire with purchase clarity by increasing information density from discover → evaluate → buy. <b>Outcome:</b> mobile-first prototype from discovery through checkout; no commercial-performance claim.                         |           |

## EDUCATION & SKILLS
